

Re-Design: User Interface

Tou Yang – EpicSevenDB

Personas

Added Community Leader Persona

I've added a new persona titled "Community Leader" persona. This persona relates to the "Current Persona" except that it will lean more towards a current user that is an active and engaging member in the community and would eventually be an admin on the website to add new information and help with updates. Though this feature isn't implemented right away, having this persona to hold the spot will be a good reminder of all my users when moving forward with creation of the project.

Wireframes

Added Re-designed Interface and State Changes

The original wireframe document has had some changes with the interface in terms of button placements and state changes.

Storyboards

Added Specific Storyboards for Specific Personas

Since there will be 4 personas, I will be redesigning the storyboard to include 4 different paths. Each path in the story board will be for a specific Persona and how I anticipate they will use the MVP of the web application.

StyleGuide

Added Updated StyleGuide Sheet

I've updated the StyleGuide sheet to better reflect the changes I will be making to the look of the user interface.
